

Denial of Service Mitigation and Protection

Your Business Depends on 100% Uptime. Denial of Service Attackers Want 100% Downtime.

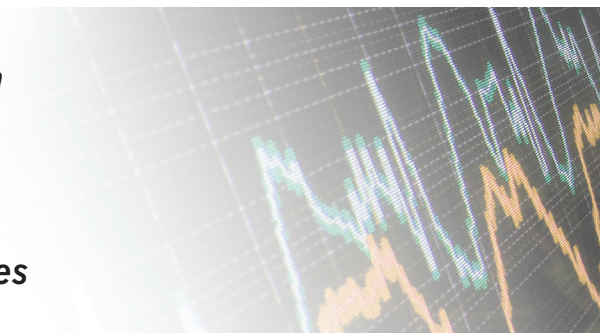

With as many as **10,000** Denial of Service attacks occurring worldwide each day according to the Computer Security Institute – some cresting beyond **10 Gbps** – your chances of experiencing an attack are growing. Without any warning, your Website and Web applications can be taken down, cutting off your customers, partners and suppliers. The loss of revenue in just an hour can be staggering – from **\$90,000** for a sales catalog company to **\$6,450,000**

for a retail brokerage, as reported in an FBI/Computer Security Institute 2007 study.

Companies who want to avoid the risk of Denial of Service attacks – rather than rely on luck for protection – count on the Prolexic Global Network. Denial of Service protection is no longer a ‘maybe’ decision for these companies.
